

Run and install the **WCHISPTool_Setup** installer.

Start the application and configure it following these steps:

1. Select the CH57x Series device tab
2. Select from the dropdown CH573
3. Deselect the checkbox “Enable RST as manual reset input pin”
4. Browse for the fpro_main.bin file downloaded with the archive

Now connect the USB cable, hold button 30 (at the left of the right joystick) and power on the device to bootloader mode. Device should be recognized by the programming utility.

Press the download (5) button to start the programming process and wait until it ends.

Device should re-boot to factory configuration.
